PATCH WELLNESS

<i>The First 24 Hours</i>	“3,000-4,000 genes restored to a more youthful and healthier state”.
<i>Within 4 Weeks</i>	The body’s repair process is first directed toward the most critical areas in need of regeneration, such as internal organs or tissues, which you might not immediately feel, before addressing issues you are more aware of.
<i>Within 6 Weeks</i>	A recent study revealed that after just six weeks, brain balance improved, as seen in QEEG brain mapping. These changes can help soothe an overactive brain, resulting in a reduction of symptoms such as memory problems, stress, sadness, sleep issues and more.
<i>Within 6 Months</i>	Changes in the cardiovascular system are evident. A study on organ function revealed that after six weeks, the cardiovascular system functioned as if it were eight weeks younger. In other words, for every day you wear the patch, your cardiovascular system behaves roughly a day and a third younger, according to bio-field sciences.
<i>Within 12 Months</i>	People are noticing that they look and feel younger, both physically and mentally.
